

# PANEL BOARD RELEASE AGENT

RELEASE 984

“

Dilute 984 for press belt spraying to optimize the spray coverage, reduce chemical consumption, and save on cost as a result

”

## A BIT ABOUT 984

### Description

Designed exclusively for Nelspray, Release 984 is a concentrated, neutral-based product ideally designed for lines running 100% MDI resin. 984 is a water-based release that can be diluted to optimize spray coverage.

Dilute 984 for press belt spraying to optimize the spray coverage. This will enable you to reduce your chemical consumption and save on cost as a result.

### Application

Release 984 is highly soluble in water so it can be diluted and sprayed directly onto the press belts. We recommend dilutions containing 10-30% release agent. Coverage of 2-5 g/m<sup>2</sup> of release agent applied to a hot press belt should be sufficient. As this product is a suspension, we recommend avoiding excessively fine filtration in your spray system.

### Technical Information

White liquid with a mild odour, PH 7.5, specific gravity 1.08. Store in cool, dry place.
